1. Insurance database.

PERSON(driver_id:string , name:string , address:string)
CAR(regno:string , model:string , year:int)
ACCIDENT(report_number:int , accd_date:date , location:string)
OWNS(driver_id:string , regno:string)
PARTICIPATED(driver_id:string , regno:string , report_number:int, damage_amount:int)

1) Create the above tables by properly specifying the primary keys and foreign keys.
2) Enter at least five tuples for each relation.
3) Demonstrate updating of data value, insertion of new record.
4) Write queries
a. Find the total number of people who owned cars that were involved in accidents in a specific year.
b. Find the number of accidents in which cars belonging to a specific model were involved.
c. List the details of the cars not involved in accident for a specific year.

PERSON TABLE

```
CREATE TABLE PERSON(
DRIVER_ID       VARCHAR2(10),
NAME            VARCHAR2(10),
ADDRESS         VARCHAR2(50));

ALTER TABLE PERSON ADD CONSTRAINT DRVR_ID_PK PRIMARY
KEY(DRIVER_ID);

INSERT INTO PERSON VALUES( 11 , 'KRISHNAN','GURGOAN');

2. Order processing database application in a company.

CUSTOMER(custno:int , cname:string , city:string)
ORDER(orderno:int , odate:date , custno:int , ord_amt:int)
ORDER_ITEM(orderno:int , itemno:int , quantity:int)
ITEM(itemno:int , unitprice:int)
SHIPMENT(orderno:int , warehouseno:int , ship_date:date)
WAREHOUSE(warehouseno:int , city:string)

1) Create the above tables by properly specifying the primary keys and foreign keys.
2) Enter at least five tuples for each relation.
3) Produce a listing: custname , No_of_orders , Avg_order_amount , where the middle column is
the total number of orders by the customer and the last column is the average order amount for
that customer.
4) List the orderno for orders that were shipped from all the warehouses that the company has in a
specific city.
5) Demonstrate the deletion of an item from the ITEM table and demonstrate a method of handling the rows in the ORDER_ITEM table that contains this particular item.

CUSTOMER TABLE

```
CREATE TABLE CUSTOMER(
CUSTNO          NUMBER(20),
CNAME           VARCHAR2(50),
